# Savitur Maharaj

saviturm.com | saviturmaharaj@gmail.com | linkedin.com/in/Savitur | github.com/Savitur

## Education

**University of Calgary** Alberta, Canada
*Bachelor of Science in Computer Science— GPA: 3.86/4.00* *2022 – 2026*

## Technical Skills

**Languages**: JavaScript, Swift, Python, C#, Java, C, HTML/CSS
**Technologies and Frameworks**: React, Typescript, Nodejs/Express, ASP.NET, Firebase, Pytorch, MySQL, Tailwind, Sass, Git, Github, Gitlab, Docker
**Relevant Coursework**: Data Structures and Algorithm Analysis, Database Management, Computer Networks, Operating Systems, Web-based Systems, Distributed Systems, iOS Programming, Deep Learning with Computer Vision

## Experience

**Software Technician Intern @ KaizenLAB (Part-Time)** | *Typescript, Nodejs/Express, MySQL* May - Aug 2024

- Liaised with I.T. management to define API requirements and contributed to designing a RESTful service architecture
- Developed and deployed an automated requisition workflow, reducing processing time and minimizing human error through input validation and structured data storage
- Assisted with setup of the cloud infrastructure using AWS RDS for database hosting and Render for server deployment

## Projects

**Brain Tumor Classification** | *Pytorch* Dec 2025

- Developed a high-accuracy medical imaging pipeline using ResNet-50 and EfficientNet-B0, achieving an ensemble accuracy of 98.86% in classifying four types of brain tumors from MRI scans.
- Implemented a two-stage training strategy involving frozen backbone feature extraction followed by selective unfreezing and fine-tuning with a reduced learning rate to optimize model convergence.

**VolunTree** | *SwiftUI, ASP.NET Web API* Oct 2025

- Built a prototype iOS app for connecting users with volunteering opportunities
- Enabled creation, update, and management of volunteering opportunities for registered organizations

**Book Club Organizer** | *React, Tailwind, Firebase, Docker* Dec 2024

- Implemented themed book club creation and membership features with a dynamic UI
- Integrated Firebase Authentication and Firestore for secure user access and real-time data syncing
- Containerized the full-stack application with Docker to streamline cross-environment deployment

**Student Scheduler Management System** | *React, Sass, Node.js/Express, MySQL* Dec 2023

- Engineered a dynamic scheduling interface for students using React state management and conditional rendering to support multi-semester planning
- Designed a RESTful API to allow students to submit course ratings and retrieve personalized scheduling data

**GPU Web-scraper** | *Python, Beautiful Soup* July 2023

- Created a python script to parse Newegg's website to obtain GPU prices

## Extracurricular Activities

**VP Teaching for Origami-Aid** Apr 2024 - Jun 2025

- Coordinated with other club executives to plan weekly folding sessions and collaborations with other clubs

**Executive of Academic Events for the Computer Science Undergraduate Society** Nov 2023 - Mar 2025

- Created workshops for undergraduate students and assisted in planning CalgaryHacks 2025
